

A recipe for success with small business server solutions

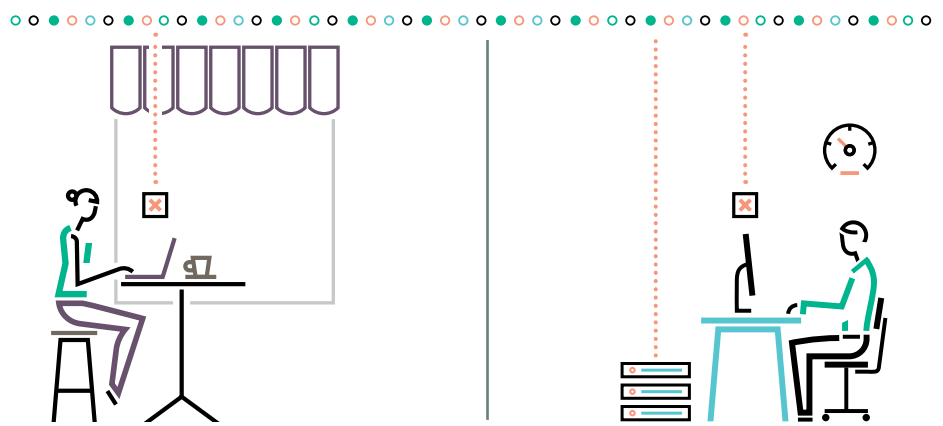

Imagine you run a restaurant chain. Your new app is wildly popular—but putting a strain on IT. How can you have your cake and eat it too?

Create a self-service Hybrid Cloud environment

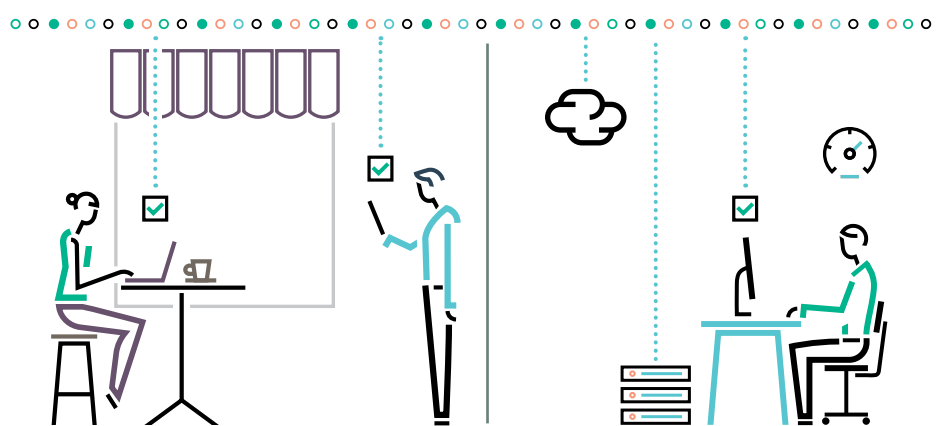

On-premises only

Developers have to wait for resources and share them with production workloads—slowing performance and extending launch timelines.

Cloud + on-premises

Evolve to hybrid cloud to provide flexible resources that don't impact mission-critical and other local workloads.

Leverage Microsoft® Windows Server® with Hyper-V® and Microsoft Azure® Cloud Services

Improve productivity

Empower teams to test, develop, and deploy applications on-premises or in the cloud with more resource availability and better collaboration.

Enhance the customer experience

Respond quickly to demand for new apps, services, and updates.

HPE helps you deliver apps fast

HPE Small Business Solutions give developers access to on-demand resources so they can roll out updates and new apps and services faster, without impacting production performance.
